Weekly Report

Group: 4A Date: 28.09.26

Achievements:

This week, we decided to work on incorporating proportionality into RAG. Our current project title is "Proportional Retrieval for Trustworthy RAG: Selecting Representative Evidence and Measuring Answer Validity." This direction follows our professor's research guidelines. We also read several related papers to understand the topic and check whether similar work already exists. We are also considering including spatial data, but this is not finalized yet.

Problems:

What kind of problems or difficulties did you face the last week? Did you manage to solve them?

The main difficulty this week was finding a suitable dataset. Our method requires a dataset with appropriate context and possibly location-based information. We are currently searching for suitable datasets and hope to finalize one within the next 2–3 days.

Meetings:

How many meetings did you have as a group and who attended? Did you meet your supervisor(s) this week?

We had a group meeting this week with all three members present. During the meeting, we discussed and refined our proposed research direction, reviewed the related literature, and discussed possible datasets and next steps. But we were connected through whatsapp and discussed everyday's updates.

We did not have a meeting with our supervisor, Professor Georgios Fakas, this week. However, we continued our work based on the guidelines and research direction discussed during our previous meeting with him.

Project Diary:

For each member of the group, note the number of hours worked and the activities that these hours were spent on.

Each group member worked approximately 10 hours this week. We mainly spent the time reading papers, discussing the research idea, and searching for a suitable dataset.

Plan:

What is your plan for the following week? Next steps? Goals? Tasks? Milestones? Meetings?

Next week, we plan to implement a baseline RAG system and complete the other baseline tasks needed for the project. We will also continue working on our proportionality-based approach and finalize the dataset.

Contact person of the week:

This is the person we should contact if we have any further questions.
